

Printing in DECwindows

Overview

This User Note covers the steps for printing from the Session Manager in DECwindows.

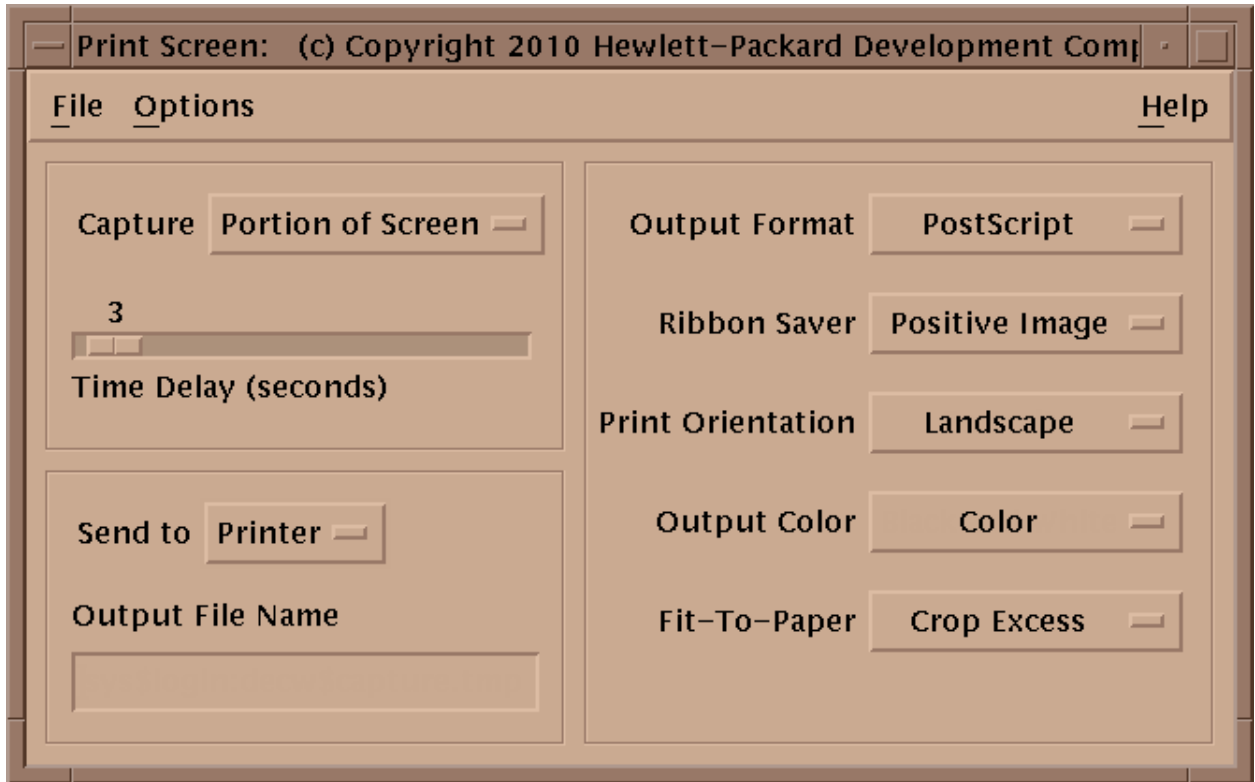

NOTE: If you are printing a Trend, open the Trend window and select `Options > Solarize`. This turns the screen background white and saves ink/toner.

Steps

1. In the DECwindow Session Manager, click `Applications > Print Screen`.

DECWINDOWS PRINTING

2. Set up the Print Screen as shown above. The three-second time delay is used to ensure the window you want to print has nothing in front of it.

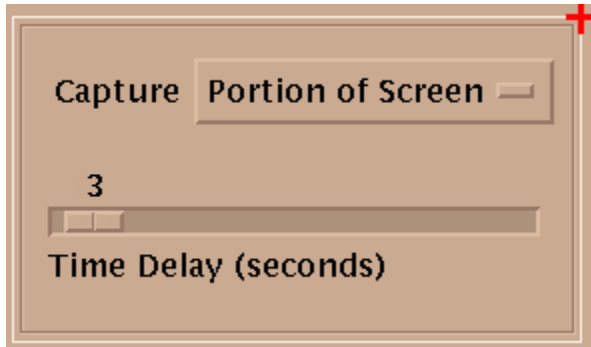

3. (Optional) If the output (Send to) is not already set to "Printer", select it from the drop-down menu.

4. Click File > Print.

DECWINDOWS PRINTING

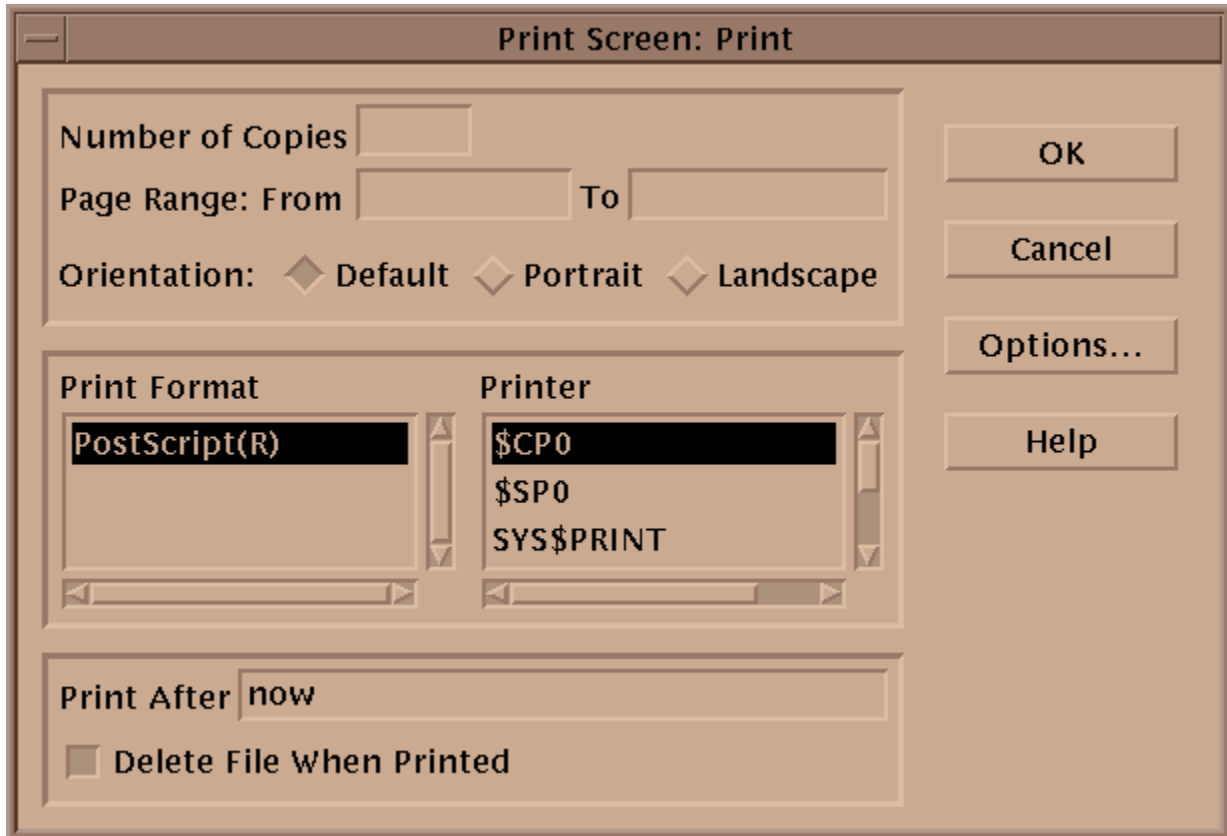

5. The mouse cursor will change into a red crosshair. Place the crosshairs at the lower left corner of the area of the screen you want to print. Press and hold the left mouse button, move the mouse to the upper right corner of the area to be printed, and then release.
6. A picture of the area will be sent to the printer. Typically, this is the default printer, \$CP0.

7. If you want to use a different printer, click `File > Print...`

DECWINDOWS PRINTING

8. This brings up the printer setup page. Choose the alternate printer from the list and click **[OK]**. After the three-second time delay, you will see the red crosshairs.
9. Finish the process as described above.
